

Avangan Polymetallic Mining Area

Location: Qorveh County, Kurdistan Province

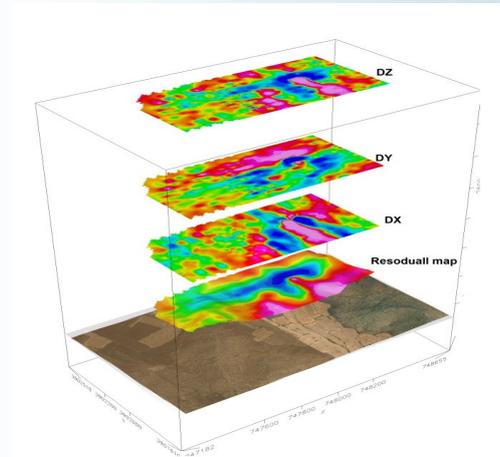

Area: 38 ha

Anomaly: Polymetallic

Geophysics: Magnetometry

Trenching: 300 m³

Drilling: 2000 meters

Due to its location in the Sanandaj-Sirjan geological zone, Kurdistan Province has numerous mineral potentials. The Avangan polymetallic prospect, belonging to Behsazan Farnood Haffar Engineering Company, received exploration permits type 1 and 2 in 2022, and after completing surface studies, received exploration permits type 3 and 4 in 2023. Subsurface operations began there in 2024. Nearly 2000 meters of core drilling and RC exploration drilling have been carried out there.
